Currently working as a Risk Analyst in Operations at Evolution Gaming.

Going into my last year of Bachelor CS degree, looking to get a head start and transition into the web development field.

My experience in the development field is relatively small, however I really enjoy working within the web front-end realm and everything associated with it.

I am most comfortable with JavaScipt/TypeScript, but I do have some minor general experience with languages like C++ / Java / Python from university and am actively trying out new languages/frameworks/libraries/build tools to keep up with the fast moving tech space.

Skills:

HTML   CSS   JavaScript   TypeScript   Git   Sass   Webpack   Jest   GSAP   CI/CD   SQL   JIRA   Kanban / Scrum   Vue

Experience

Evolution Gaming

Jul 2018 to Present
